

# iLov Analog

Max for Live device

The Elektron Analog Four and Analog Keys are a fully Analog 4-voice table top synthesizer with digital controls and digital send effects. Each of the four voices (track) has a set of pre-defined modules (oscillators and waveform generators, filters, envelopes, amplifiers and LFO's and a set of send effects (delay, reverb, chorus effect) that may be combined, routed and modulated in conventional as well as unconventional ways.

iLov Analog is a kit of 3 Max For Live devices designed to easily control all the parameters of your Elektron A4 (MK1/MK2) or Analog Keys synthesizer in Ableton Live. Each track can be edited and automated on its own midi channel.

Creating, editing, and saving your sounds become child's play.

## Recommended System Requirements:

Elektron A4 (MK1/MK2) or Analog Key.  
Ableton Live 10 or higher.  
Max For Live with Max 7.3.4 or higher.  
OSX or Windows.

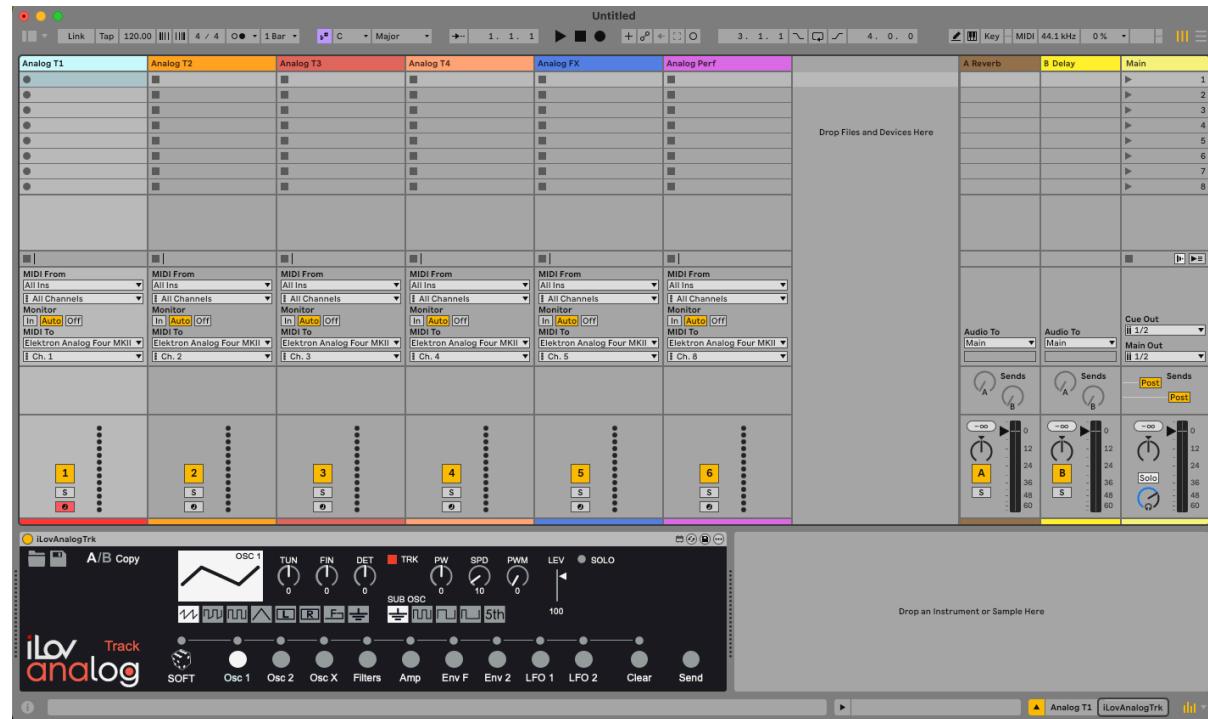

## Installation :

Put iLovAnalogTrk, iLovAnalogFX and iLovAnalogPerf amxd files in the Max MIDI Effect folder:

**MacOS:** Macintosh HD/ Users / [username] / Music / Ableton / User Library / Presets / MIDI Effects / Max MIDI Effect

**Windows:** \ Users \ [username] \ Documents \ Ableton \ User Library \ Presets\ MIDI Effects \ Max MIDI Effect

Or simply drag iLov Analog amxd files onto midi tracks and, in the device windows upper right corner, click to save, press enter as the name is highlighted in the browser and Ableton will place it in its respective Max For Live midi instrument.

## Overview :

iLov Analog includes 3 Max for Live midi devices:

- iLov Analog Track controls one synth track parameters.
- iLov Analog FX controls the parameters of the FX track.
- iLov Analog Perf controls the 10 knobs of the performance mode.

## A4/Analog Keys configuration :

Set the following parameters on your hardware:

- Global/ Midi Config/ Port Config/ Param Output: NRPN.
- Global/ Midi Config/ Port Config/ Encoder Destination: Int+Ext.
- Global/ Midi Config/ Channels/ Select midi channels for dedicated midi tracks, FX and Performance (usually 1,2,3,4 for Tracks synth, 5 for track FX and 8 for Perf)
- Global/ System/ USB Config/ Untick Overbridge and thick Midi-USB.

## iLov Analog Track :

Edit the synth track parameters of a sound. Use until four iLov Analog Track devices for synth track 1 to 4.

- **Open file** button opens a window that let you load one of the saved patches in your computer and send it to the Elektron A4/Analog Keys.
- **Save file** button opens a window that let you save the current sound patch to the computer.
- **A/B** comparison button compares two sounds. **Copy** button copies the current sound to A or B.  
By clicking on the led above the **die**, select or deselect all the sections.
- The **DIE** button randomizes parameters values of ticked section. Select them by clicking led above section buttons.  
**SOFT** will generates values close to current parameter values.  
A SOFT randomization will create a slight “variation” in the sound of the current program.  
**FULL** will generate completely new parameter values.  
**⚠** Be careful with your audio monitors, **FULL** randomization can be surprising !
- Access to the sections to edit by choosing between **Oscillator 1**, **Oscillator 2**, **Oscillator X**, **Filters**, **Amplitude Envelope**, **Envelope Filters**, **Enveloppe 2**, **LFO 1** and **LFO 2**.
- **Clear** initializes parameters values of ticked section. By clicking on the led above Clear button, select or deselect all the sections.
- **Send** button sends all parameters data to the the A4/Analog Keys.

## Getting sound from your A4:

iLov Analog Track can receive data sound from the Elektron A4 MK1, MK2/ Analog Keys:

Send sysex data sound to iLov Analog Track:

 Sound/ Sound Manager/ select a sound/ press right/ Send SYSEX

 In Ableton Live, Arm Recording button of the midi track must be "on" to get sysex from your A4/Analog Keys.

 If you select another sound on your A4/Analog Keys, do not forget to send sysex again to edit this.

## Oscillators sections:

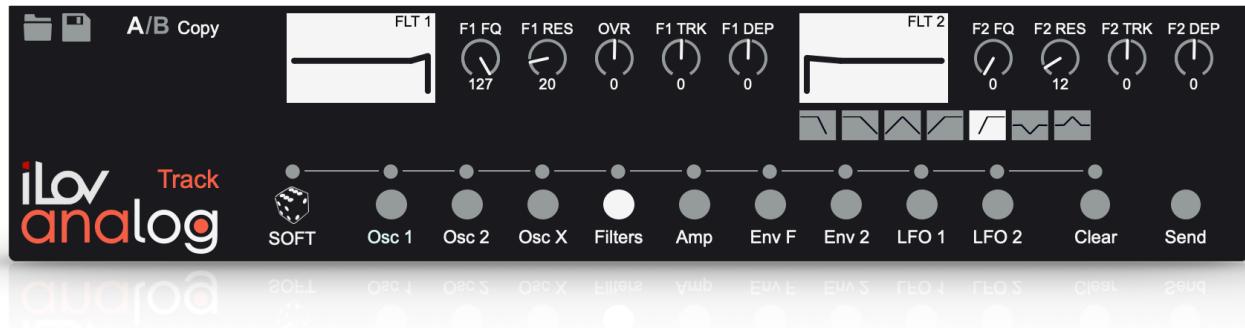

- **Osc1** and **Osc2** sections contains parameters of both oscillators and their sub-oscillators.
- **SOLO** button mutes the other oscillator. When accessing the other oscillator section, it is automatically reactivated.

## OscillatorX section:

- **OscX** section contains settings that will affect both oscillators, plus the Noise generator.

## Filter section:

- **Filters** section contains settings that control the two track filters and the overdrive.

## Amp section:

- **Amp** section contains settings for the amplitude envelope, plus the effects sends, panning and volume of the sound.

## Envelope Filters section:

- **Env F** section contains parameters controlling envelope cutoff filters and 2 user-selectable destinations.

## Envelope 2 section:

- Env 2 contains settings of the second assignable envelope.

## LFO's sections:

- LFO 1 and LFO 2 contains settings that will modulate other track parameters.

## iLov Analog Track midi automation controls:

- Volume, Pan, Send Chorus, Send Delay, Send Reverb.
- OSC1 Level, OSC1 Tune, OSC1 Tune Fine, OSC1 Sub, OSC1 PWM Depth, OSC1 PWM Speed, OSC1 Pulsewidth, OSC1 Level.
- OSC2 Level, OSC2 Tune, OSC2 Tune Fine, OSC2 Sub, OSC2 PWM Depth, OSC2 PWM Speed, OSC2 Pulsewidth, OSC2 Level.
- OSCX Sync, OSCX Slide Time, OSCX Bend Depth, OSCX Vibrato Depth, OSCX Vibrato Fade, OSCX Vibrato Speed.
- Noise Fade, Noise Level, Noise SH.
- Filter1 Freq, Filter1 Res, Filter1 Env Depth, Filter2 Freq, Filter2 Res, Filter2 env Depth.
- Amp Attack, Amp Decay, Amp Sustain, Amp Release.
- EnvF Attack, EnvF Decay, EnvF Sustain, EnvF Release.
- Env2 Attack, Env2 Decay, Env2 Sustain, Env2 Release.
- LFO1 Waveform, LFO1 Speed, LFO1 Speed Multi.
- LFO2 Waveform, LFO2 Speed, LFO2 Speed Multi.

## iLov Analog Track Push controls:

	1	2	3	4	5	6	7	8
Trk	OSC1 Level	OSC2 Level	Noise Level	Filter 1 Freq	Filter 2 Freq	Attack	Decay	Volume
OSC1	Wave form	Coarse Tune	Fine Tune	Sub Osc	Pulse width	PWM Speed	PWM Depth	OSC1 Level
OSC2	Wave form	Coarse Tune	Fine Tune	Sub Osc	Pulse width	PWM Speed	PWM Depth	OSC2 Level
OSCX/ Noise	Sync Amount	Bend Depth	Slide Time	Vibrato Speed	Vibrato Depth	Sample Old	Noise Fade	Noise Level
Filters	Filter 1 Freq	Filter 1 Reso	Filter 1 Depth		Filter 2 Freq	Filter 2 Reso	Filter 2 Depth	
Amp	Attack	Decay	Sustain	Release	Chorus Send	Delay Send	Reverb Send	Pan
Env Flt/ Env 2	Env Flt Attack	Env Flt Decay	Env Flt Sustain	Env Flt Release	Env2 Attack	Env2 Decay	Env2 Sustain	Env2 Release
LFO	LFO 1 Speed	LFO 1 Multiplier			LFO 2 Speed	LFO 2 Multiplier		

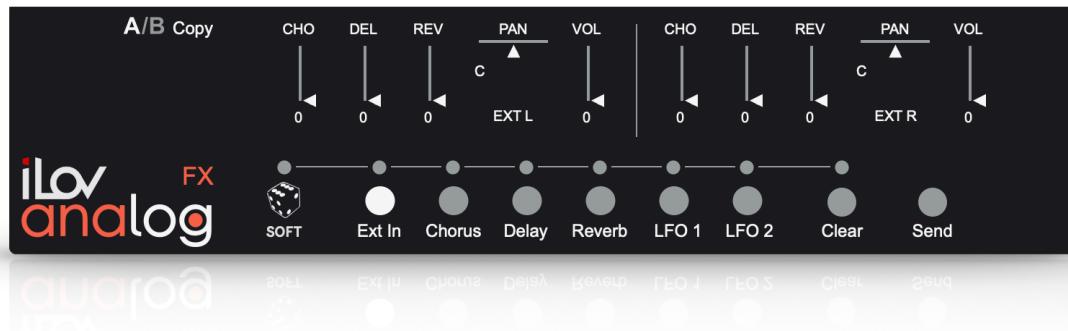

## iLov Analog FX:

Edit the FX track parameters.

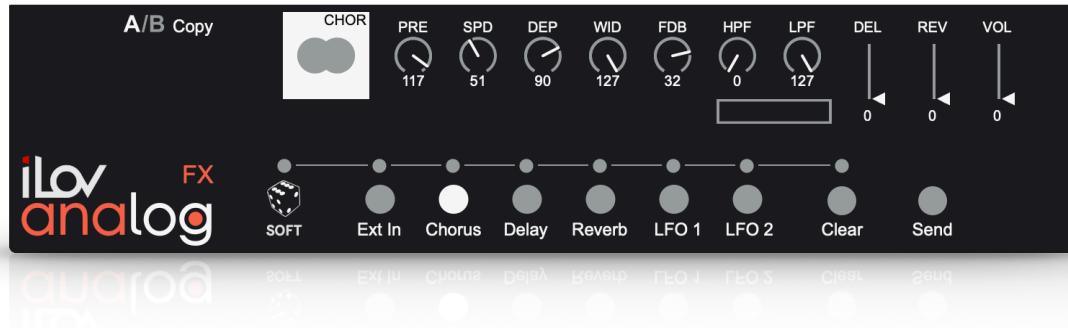

- **A/B** comparison button compares two sounds. **Copy** button copies the current sound to A or B.
- The **DIE** button randomizes parameters values of ticked section. Select them by clicking led above section buttons.  
By clicking on the led above the **die**, select or deselect all the sections.
- The **Smart randomization** button selects the randomization mode :  
**SOFT** will generates values close to current parameter values.  
A SOFT randomization will create a slight “variation” in the sound of the current program.  
**FULL** will generate completely new parameter values.
- Access to the sections to edit by choosing between **External In**, **Chorus**, **Delay**, **Reverb**, **LFO 1** and **LFO 2**.
- **Clear** initializes parameters values of ticked section. Select them by clicking led above section buttons. By clicking on the led above Clear button select or deselect all the sections.
- **Send** button sends all parameters data to the Elektron A4/Analog Keys.

## Ext In section:

- **Ext In** section contains parameters controlling external signal path from the audio inputs.

## Chorus section:

- **Chorus** section contains settings of the wideshift chorus.

## Delay section:

- **Delay section** contains settings of the saturator delay.

## Reverb section:

- **Reverb section** contains settings of the supervoid reverb.

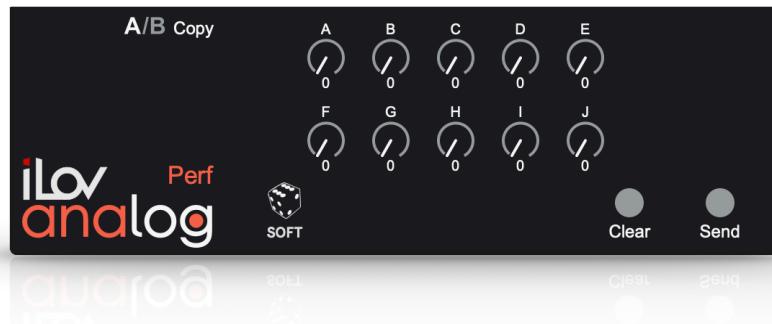

## LFO's sections:

- **LFO 1** and **LFO 2** contains settings dedicated to modulate other FX track parameters.

## iLov Analog Perf:

Controls the ten performance track parameters.

## iLov Analog Perf midi automation controls:

- Perf A, Perf B, Perf C, Perf D, Perf F, Perf G, Perf H, Perf I, Perf J.

## iLov Analog Perf Push controls:

	1	2	3	4	5	6	7	8
Perf ABCDE	Perf A	Perf B	Perf C	Perf D	Perf E			
Perf FGHIJ	Perf F	Perf G	Perf H	Perf I	Perf J			

## Tips:

- Start from an initialized kit properly midi configured on the A4/Analog Keys.
- When launching an Ableton live session, each iLov Analog devices automatically send all data to the A4/Analog Keys provided that the synthesizer is already on, properly midi connected and configured in Ableton (It takes 7 seconds).  
In another way you can send data by clicking **Send all** on each iLov Analog device to transmit all data to your synthesizer.
- If a midi track is muted, no transmission can be possible. Try to save the session with the midi tracks unmuted in order to ensure the automatic send when reloading.

## Troubleshooting:

- If at the start of an Ableton session, the sound of a midi track sounds no to be the same as it should be, click **Send** to refresh data in the A4/Analog Keys.
- If another midi device is used on a same midi track, this may stop the data transmission. Switch off this midi device in order to make manipulations through iLov Analog.

## Support:

If you need help, have question or if you have encountered any problem using iLov Analog, you can reach support at [info@ilovmachines.com](mailto:info@ilovmachines.com)
